
Solutions and Extensions

FEFLOW can be customized and/or extended in three possible ways:

- Plug-ins for the open programming interface IFM
- Import/export filters for specific file formats
- Customized user interfaces for specific applications (in upcoming versions)

All customizing for your needs can be done by our experienced team. Please contact [support\(at\)dhi-wasy.de](mailto:support(at)dhi-wasy.de) for further information!

For many requirements, there are already existing solutions. For example, FEFLOW can be coupled to MIKE11 by using an interface plug-in [IfmMIKE11](#), available as an extension for FEFLOW. Please have a look at the lists of [existing IFM plug-ins](#) and [import/export filters](#), too!
